What does the he need from the System?	<ul style="list-style-type: none">• Needs to be able to keep a track of his deadlines and meetings• Needs to be able to invite to events and meetings• Needs to receive notifications by email	

Scenario

Charles wakes up around 6am and switches on his pc before taking a shower. After making some breakfast he sits down at his machine and logs into his calendar to check his commitments for the day. Spotting a clash in his timetable, he edits one of his reminders and pushes it back an hour he has free. He then logs off and heads to work.

Whilst on his way to work he receives an email notification from a colleague inviting him to a meeting later in the week.

When Charles arrives at work he logs on to his computer and opens his calendar. He then accepts the meeting invitation he received earlier, adding it to his calendar. He then goes to give his lectures. Throughout the day he receives reminders for the events he has coming allowing him to easily keep track of his day without having to keep logging in to his computer.
